Boom Lifts

Boom Lifts Training Oshawa - Boom lifts are machinery that has a platform which could be lowered or lifted to many heights, thus making this piece of equipment an important necessity in a wide range of professions. Available in quite a few specific varieties such as aerial lifts, scissor platform lifts, and knuckle boom lifts, each model functions very specifically.

The regular aerial lift variation is frequently utilized at ski lodges to transfer people who are not comfortable with the ski lift. Working in a manner analogous to that of an elevator, skiers are transported up the mountain gradually, stopping at stations along the way until they access the peak. Aerial hoists are also utilized in construction, moving people safely up and down the sides of multi-level building sites.

Scissor lifts are quite frequently used by service businesses as the ideal method to safely facilitate workers to repair and work on cables and wires attached to poles. Phone, cable and power providers have relied on the proficiency of this type of boom lift for years.

The knuckle boom jack is created for use within areas of uneven ground and where the need to reverse course could be required. This type of boom jack has the ability to fit in tight spots where a scissor lift cannot fit. Working between multiple machines in a manufacturing plant or in near proximity between two walls, the knuckle boom additionally features a standard table outfitted with rails for security and employee safety.

Depending on the job requirements and the sort of work to be completed will establish the appropriate model of boom lift to decide on. Luckily, there is a version suited for just about any purpose.
